NIKHIL GUMASTA

Vidisha, Madhya Pradesh, India | +91 62654 48064 | EMAIL | GITHUB

SUMMARY

Second-year B.Tech student in Artificial Intelligence & Data Science with hands-on experience building and deploying AI/ML projects end-to-end — from training models in Python to shipping agentic AI tools on cloud infrastructure. Comfortable across the stack: Python, FastAPI, React, and Microsoft Azure. Drawn to practical, resource-constrained problem solving and enjoys figuring things out independently, documenting the process, and sharing it with others.

EDUCATION

Samrat Ashok Technological Institute, Vidisha 2024 – 2028 (Expected)
Bachelor of Technology (B.Tech) — Artificial Intelligence & Data Science | CGPA: 7.2

CERTIFICATIONS

- Claude 101 — Anthropic
- AI Fluency — Anthropic

TECHNICAL SKILLS

Languages: Python, Java, SQL
AI / ML: TensorFlow, Keras, scikit-learn, pandas, NumPy
Agentic AI & LLM Tooling: LangChain, LangGraph, CrewAI, Anthropic Claude API, OpenRouter, Gemini API
Web & Backend: FastAPI, React, Node.js, HTML, CSS, Bootstrap
Cloud & DevOps: Microsoft Azure (VM provisioning & deployment), Git, GitHub, PM2
Databases & Storage: MongoDB Atlas, JSON file handling
Core CS: Data Structures & Algorithms, Object-Oriented Programming, Computer Networks

PROJECTS

OpenClaw — AI Agent Platform | *Python, FastAPI, React, Microsoft Azure*
- Designed and deployed an agentic AI assistant platform on a Microsoft Azure VM, provisioned using Azure for Students credits.
- Integrated OpenRouter and Google Gemini free-tier models as a fallback reasoning backend after exhausting initial Anthropic API credits, keeping the platform running at near-zero cost.
- Built a FastAPI backend and React frontend delivering a Claude-style conversational interface, and documented the Azure for Students setup in a technical blog post so other students could replicate a low-cost AI deployment.

ML Classifiers from Scratch | *Python, TensorFlow/Keras, scikit-learn, Jupyter*
- Built and trained an Artificial Neural Network (TensorFlow/Keras) and a Decision Tree classifier (scikit-learn), working with a custom CSV dataset end-to-end — cleaning, preprocessing, training, and evaluation — in Jupyter Notebook/Anaconda.

Anonymous Chat Telegram Bot | *Node.js, Telegraf.js, MongoDB Atlas, Azure VM, PM2*
- Deployed a Telegram bot enabling anonymous, gender-matched conversations with returning-user profile persistence, hosted on an Ubuntu Azure VM using MongoDB Atlas for storage and PM2 for process management.

Personal Portfolio Website | *HTML, CSS, JavaScript*
- Designed and built a personal portfolio site (nikhilg.tech), iterating through several visual design versions before landing on an Electric Cyan/Slate palette with Bebas Neue typography; deployed live with source on GitHub.

Student Data Manager & File Organizer | *Python*
- Built a console-based CRUD application for student records using lists, dictionaries, and JSON file handling for persistent storage, structured into modular functions.
- Developed a separate script that automatically organizes files by type using the OS and shutil modules with conditional categorization logic.

ACTIVITIES & EVENTS

- BioPackathon 2026 — submitted “TriBio Sachet,” a proposal for biodegradable packaging for pan masala sachets, backed by peer-reviewed sources.
- Participant, Google Developers Solution Challenge 2025.
- Participant, Tantra Fiesta (IIIT Nagpur) — built a Line Following Robot.
- Participated in community development and social awareness programs through NSS (National Service Scheme).
- Collaborated with peers in team-based activities, strengthening teamwork and discipline.

ACHIEVEMENTS

- Winner, Counterspell Hackathon 2024.
- Practiced Data Structures & Algorithms extensively using Java.
- Actively builds and self-teaches across AI/ML, full-stack development, and cloud infrastructure.
